# Why?

FDE, 2FA, etc

- Limitations in physical attacks (after auth)
- How to auto "un-auth" (when replaced at the helm)

# Solutions

- Bluetooth
  - + lots of options
  - + convenient
  - Designed to **unlock** (insecure)
  - Unreliable tech (tuned slow)
  - High attack surface (radio)

# Solutions

- Lasers
  - false-negatives

## New USB cable kills your Linux laptop if stolen in a public place

Building your own BusKill cable costs between \$20 and \$45.

 By [Catalin Cimpanu](#) for [Zero Day](#) | January 2, 2020 -- 21:56 GMT (05:56 SGT) | Topic: [Security](#)

A software engineer has designed a so-called USB "kill cable" that works as a dead man's switch to shut down or wipe a Linux laptop when the device is stolen off your table or from your lap in public spaces like parks, malls, and internet cafes.

The cable, named **BusKill**, was designed by [Michael Altfield](https://twitter.com/MichaelAltfield) (<https://twitter.com/MichaelAltfield>), a software engineer and Linux sysadmin from Orlando, Florida.

# Linux-only (udev)

```
cat << EOF | sudo tee /etc/udev/rules.d/busKill.rules  
ACTION=="remove", SUBSYSTEM=="usb", RUN+="DISPLAY=:0 xscreensaver-command -lock"  
EOF  
sudo udevadm control --reload
```

- 2017 – Initial Dev, QubesOS Only
- 2020-01 Windows CLI port by community
- 2020-06 GUI App
  - Windows 10 (PyInstaller)
  - MacOS (DMG)
  - Linux (ApplImage)
- 2020-10 GUI App v0.4.0 Released

## Roadmap

### Hardware

- 3D-Printable Magnetic Breakaway

### Self-Destruct Triggers

- Veracrypt
- FileVault
- BitLocker

### CI, DevOps, QA

- Reproducible Builds
- More OS Testing

### Python Dev Roadmap

- Shutdown trigger
- Port to Android/iOS
